IN THE CLAIMS:

Please amend claims 1-4 and 43 as follows:

1.   (Amended)   An image sensor device which optically reads out a document comprising:

an image sensor portion having a plurality of light receiving elements [arranged regularly] facing a document to be read out; and

a thin film light source arranged [closely contacted] on the document side of said image sensor portion, said thin film light source emitting light to said document,

wherein said thin film light source includes [more than one] a plurality of light emission [portion having an area smaller than that of said light receiving elements] portions, each of said light emission [portion] portions corresponding to each of said light receiving elements, [and] said light emission [portion includes] portions including a light blocking layer on said light receiving [element] elements side, and [is] said light emission portions being arranged [on a
